

Alpha AI Automation - Tester YAML Action Documentation

This document describes supported YAML actions for testers to write automation flows in Alpha AI Automation.

Action: launch_app

Description: Launches the app using the specified package name.

Example:

```
- action: launch_app
  package_name: com.example.app
```

Action: input_text

Description: Inputs text into a field identified by its label.

Example:

```
- action: input_text
  target_text: Username
  value: myuser
```

Action: click

Description: Clicks a button or clickable text view.

Example:

```
- action: click
  target_text: LOGIN
```

Action: select_list_item

Description: Selects an item from a list or recycler view by its text.

Example:

```
- action: select_list_item
  target_text: "Product 3"
```

Action: check_text_equals

Description: Checks if a TextView's text exactly matches the expected value.

Example:

```
- action: check_text_equals
  target_text: "Welcome User"
```

Action: check_text_contains

Description: Checks if a TextView's text contains the expected substring.

Example:

```
- action: check_text_contains  
    target_text: "Welcome"
```

Action: scroll_to

Description: Scrolls to an element with the specified text.

Example:

```
- action: scroll_to  
    target_text: "End Item"
```

Action: toggle_switch

Description: Toggles a switch or checkbox identified by its label.

Example:

```
- action: toggle_switch  
    target_text: "Enable Notifications"
```

Action: back

Description: Presses the device back button.

Example:

```
- action: back
```
